## Growth Habit and Characteristics:

- Tested as PST-B2-42
- Compact, spreading growth habit / Moderately aggressive / Fine leaf width
- Very uniform, upright dense turf with bright, dark green color
- Performs well in a wide range of well-drained soils, pH range of 5.5 to 7.5

## Performance Characteristics / Adaptations:

- Excellent performance throughout all zones of bluegrass adaptation
- Top performer at lower mowing heights
- Offers superior year-round turf density
- Performs well at low to high rates of N
- Excellent drought tolerance
- Good overall wear tolerance
- Outstanding overall disease tolerance
- Tolerates full sun to light shade
- Compatible with elite bluegrasses, i.e., Midnight / Moonlight in mixes

## Establishment and Maintenance:

- Seed at 2-3 lbs. per 1000 sq. ft.
- Early fall and spring seeding are best. Late spring / summer plantings not recommended in most locations
- Seedbed should be kept moist during germination and establishment
- Germinates in 14–21 days with optimal soil temperatures, 55–80 degrees F. Full coverage in 8–10 weeks
- First mowing recommended when turf reaches approximately 2 inches in height

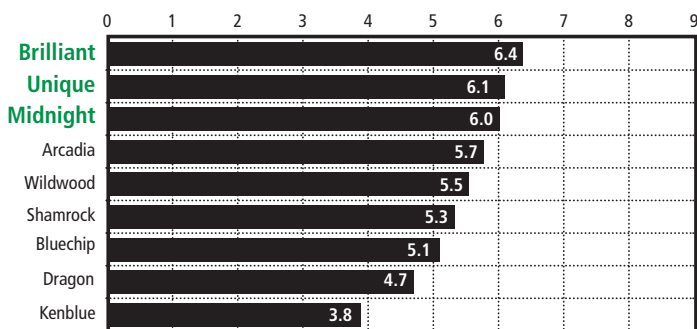

## Established Turf Maintenance:

- For best performance, fertilize at annual rate of 3–4 lbs. N / 1000 sq. ft.
- Deep, infrequent irrigation will provide quality turf. Increase frequency during summer months
- Recommended mowing height, 1/2 to 2 1/2 inches.

## Certified Blue Tag Program

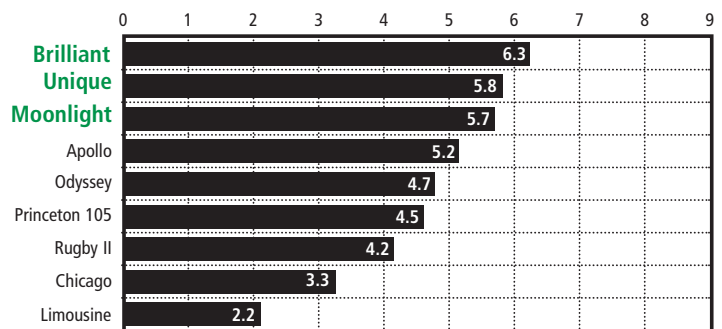

Brilliant blue tags earn cash for GCSAA's 'Investing in the Beauty of Golf' program and STMA's SAFE Foundation for 'Safe Athletic Field Environments'. Ask your Turf-Seed products supplier for details.

NTEP Final Report, 1996-2000, Turfgrass Quality while maintained at 1/2 to 1 inch mowing. 8 test locations, 4 yrs data, 103 Kentucky Bluegrasses tested  
LSD 0.2 Rated 1-9 9=ideal turf
