

# Impact Kentucky Bluegrass

## FEATURES:

- Superior heat and drought tolerance
- Ideally adapted to tolerate cold winters
- A deep rich color with little fertilizer
- Excels at mowing heights of ½ inch

## PERFORMANCE CHARACTERISTICS:

- **SUPERIOR SUMMER PERFORMANCE:** **Impact** is heat and drought tolerant and ranks alongside Midnight, Unique, Monopoly and Washington at turf trials in Washington, DC during the drought conditions of the summer of '95. **Impact** is a true “transition zone bluegrass.”
- **SUPERIOR COLD TOLERANCE:** Ideally adapted to “Bluegrass Country” of the Northern Turfgrass zone, it is quick to recover from winter dormancy.
- **EXCEPTIONAL SHADE TOLERANCE:** **Impact** has topped many varieties in shade by a considerable margin.
- **REDUCED FERTILIZATION NEEDS:** **Impact** requires fewer fertilizer applications than other varieties to maintain a dark green color. It produces a highly uniform, very robust low growing turf.
- **FAIRWAY QUALITY:** Highly recommended to fill the need for a “true fairway bluegrass.” Mowing heights as low as ½ inch are possible for the first time in a bluegrass variety. **Impact** is also perfectly suited for home lawns, athletic fields, sod farms, cemeteries, and parks.
- **HIGH SOD TENSILE STRENGTH:** 25% better sod strength than other Kentucky bluegrasses in a Maryland study, and 44% better strength in a Nebraska study. Higher sod strength means quicker sod harvest, less wastage.

## DISEASE TOLERANCE:

- Leaf Spot                      Excellent resistance
- Rust                              Excellent resistance
- Brown Patch                  Very good resistance
- Damping Off                  Good resistance
- Melting Out                  Unmatched resistance

## DEVELOPMENT:

**Impact** was bred by Jacklin Seed Research Director, Doug Brede, Ph.D., at Jacklin Seed. It originated as a highly apomictic, single-plant selection from hybrid cross number 89-1037, made in the field in July, 1989, in Post Falls, ID.
